TRAINING REGISTRATION FORM
CYBER SECURITY

OBJECTIVE

Introduction to the technical and governance security solutions that permit to mitigate security threats and to quickly recover in case of a successful attack.

OUTLINE

The exposure to security threats continues to increase as business environments evolve. New forms of threats and vulnerabilities are invented, developed, automated and distributed on a daily basis. Managing security and detecting novel as well as existing threats proactively is a core challenge to every organization, and continuously improving the security posture of key environments is essential.

The aim of this course is to provide a comprehensive coverage of the information security Defense-in-Depth and Defense-in-Breadth methodology. We will use case studies from different sectors of society.

Topics covered in the course include:

- Setting up an Information Security Management system (ISMS);
- OS security (Windows and Linux);
- Network security principles and useful tools;
- Endpoint security;
- Secure development methodologies;
- Mobile application security;
- Security monitoring and log analysis (SIEM, SOC);
- Attacks and countermeasures;
- Resilience (BCP&DRP);
- Industrial systems security (SCADA, DCS, IACS);
- Cloud security, and
- IoT security considerations

WHO SHOULD ATTEND?

Telecom and IT engineers, Middle Management
